

Trigger Assignments :

1. System.debug the following statements for any object

a) Trigger.New b) Trigger.Old c) Trigger.NewMap d) Trigger.oldMap

2. System.debug the following statements for all events (Before & After)

a) Trigger.New b) Trigger.Old c) Trigger.NewMap d) Trigger.oldMap

3. Write a Trigger on Lead which will create the clone record.

(Hint : Map trigger.new to clone record)

#### **4. Task Creation Trigger**

- Create a task upon successful creation of a new Account.
- The task subject should be set as –Meeting with <specific Account's name>.
- Should be bulk safe in nature and must be capable of handling at least 200 records at a time.

5. Trigger for Updating Cases that come in from the Web, Email or Chtt

Use Case – we would like to use the email address of the incoming case to see if we can associate the correct person account to populate the Account and Contact Fields.

When a new case is created and the Case.Origin field is set to “Chat” or “Email” or “Web” take the Case.SuppliedEmail field and look up to find a match in the following account fields –

Account.PersonEmail, Account.Email\_Address\_\_c
